ATUL BHARDWAJ

Early-Career Solutions Architect | 4x AWS Certified | Production RAG on Amazon Bedrock
(206) 609-4655 | atuloninternet@icloud.com | linkedin.com/in/atul1000 | github.com/4uatul | atulbhardwaj.com
Seattle, WA (open to relocate)

EDUCATION

Seattle University | *MS, Computer Science (Data Science Specialization), GPA: 3.6* — Seattle, WA | ***Sep 2024 - Jun 2026***
Maharshi Dayanand University | *B.Tech, Computer Science Engineering* — Delhi, India | ***Aug 2020 - May 2024***

AWS CERTIFICATIONS

Solutions Architect Associate (SAA-C03) | **Machine Learning Engineer** Associate (MLA-C02) | **AI Practitioner** Foundational (AIF-C01) | **Cloud Practitioner** Foundational (CLF-C02)

EXPERIENCE

Operations Technician | *Campus Services, Seattle University* *(built its Bedrock RAG assistant)* — Seattle, WA | ***Oct 2024 - Jun 2026***

- Shipped a self-service RAG assistant on Amazon Bedrock that took **20+ routine questions a day** off staff; led discovery with 5 campus departments and translated their feedback into business and technical requirements.
- Architected it as a scalable, fully serverless stack (Lambda, API Gateway, CloudFront, Titan Embeddings V2, Claude Haiku 4.5) and migrated 53 SharePoint pages into a Bedrock knowledge base; chose S3 Vectors over OpenSearch to save **~$350/month**.
- Front-line technical contact for 50+ customers a week: diagnosed issues on-site, owned each Jira ticket through resolution, coordinated fixes across campus teams, and trained new hires.
- Analyzed 100K+ rows of parking and transit data plus stakeholder feedback in Python and Tableau; recommended **retiring 7 underused plans** (4 parking, 3 transit), which leadership approved.

Cloud Solutions Lead | *AWS Student Builder Groups, Seattle University* — Seattle, WA | ***Jan 2026 - Jun 2026***

- Pitched an **AWS VP** directly and secured **$10K in AWS credits** for AWS Hackathon 2026; designed three tracks (Bedrock, Serverless, Cloud for Good) and ran prep workshops for each, drawing 100+ participants and 20+ final projects.
- Grew the club from **13 to 90+ members** in 6 months by building technical programming from scratch (6+ events) and recruiting external AWS speakers through LinkedIn outreach.
- Evangelized AWS in 1-to-many Bedrock and Serverless sessions (30+ builders each), demoing Lost and Found @ SU live.

Data Solutions Lead | *Statistics Without Borders (Volunteer)* — Remote | ***Sep 2025 - Apr 2026***

- **Technical lead across 7 teams** (14 contributors, 14+ datasets) for an external client focused on Asian women in sport in Europe; ran weekly syncs and turned recurring data quality issues into shared standards that non-technical leadership adopted.
- Moved 14 contributors from email file exchanges to GitHub (120+ commits, 7 repos) and wrote onboarding docs that got non-technical members committing within a week.

PROJECTS

Lost and Found @ SU *(React, S3/CloudFront, Flask, EC2, nginx, PostgreSQL/RDS, Cognito, VPC)* — GitHub

- Evaluated Lambda/DynamoDB against EC2/RDS and chose PostgreSQL on RDS to support complex relational queries.
- Applied Well-Architected best practices to deploy a highly available three-tier app across two AZs in a custom VPC (public/private subnets, Cognito auth, least-privilege IAM) that ran for **$0.90/day**.

AWS Service Advisor Agent *(Bedrock AgentCore, Strands Agents SDK, MCP, Amazon Nova Micro)* — GitHub

- Built a multi-agent proof-of-concept on Bedrock where an orchestrator agent reasons through user requirements, routes to specialist tools including a cost analyzer agent, and delivers architecture recommendations with explicit trade-offs.
- Deployed on AgentCore's managed harness with a custom MCP pricing server bridged through Gateway, choosing Amazon Nova Micro to cut per-query cost by **over 90%** versus larger models.

Also built: S3/Glue/Athena data lake | Lex chatbot via CloudFormation | NeatCode, Dockerized on Elastic Beanstalk

TECHNICAL SKILLS

Languages & DevOps: Python, JavaScript, SQL, Bash, REST APIs, Git, GitHub Actions, CI/CD, Docker, Linux, CloudFormation (IaC)
AWS: Lambda, API Gateway, EC2, S3, CloudFront, VPC, IAM, Cognito, RDS, DynamoDB; serverless, multi-AZ HA, cost optimization
Networking, Security & Storage: VPC design, subnets, security groups, least-privilege IAM, relational and NoSQL databases
AI/ML & Analytics: Amazon Bedrock (AgentCore, Knowledge Bases), RAG, MCP, TensorFlow, scikit-learn, Glue, Athena, Tableau

COMMUNITY, PUBLICATIONS & LEARNING

AWS in 60 Seconds: LinkedIn video series explaining one AWS service per 60-second clip; 8 episodes, **8K+ views**.
Campus to Cloud: Build-in-public LinkedIn write-ups on designing and deploying the RAG assistant and Lost and Found @ SU.
Speaking: Presented the RAG assistant at AWS Skills Center AI Exploration Day (160 attendees) and AWS Hackathon 2026; WTIA Tech@Night panelist (Sep 2026); AWS Skill Builders Community Webinar.
Competitions: 2nd place, AWS Agentic AI GameDay at AWS Summer in SLU.
Publications: Evaluation of Machine Learning Approaches for Accurate Heart Disease Prediction (IEEE)
Bidirectional LSTM with Convolution for Toxic Comment Classification (EAI)
Learning (in progress): Udacity Future AWS Agent Engineer Nanodegree | BeSA: Agentic AI - POC to Production on AWS
